

# Ethical AI & Governance Blueprint

Trust isn't an afterthought — it's engineered from the ground up.

At SystemBaseLabs, we design intelligent systems that comply with global ethical and legal standards

- GDPR (General Data Protection Regulation)
- HIPAA (Health Insurance Portability and Accountability Act)
- CFR 21 (Code of Federal Regulations for Biomedical Applications)

Key Pillars:

1. Explainability: AI decisions are traceable and transparent.
2. Fairness: We eliminate bias and promote equitable outcomes.
3. Accountability: Our systems log decisions and maintain audit trails.
4. Privacy-By-Design: Data protection is integrated from the outset.
5. Regulatory Compliance: Verified standards ensure you're always audit-ready.

This blueprint is a living document. Future updates will include:

- Use case-specific ethical review checklists
- Deployment validation workflows
- Audit protocol templates

Join us in shaping trustworthy AI ecosystems.
